E-Commerce - Easier Than It Used To Be:

An E-Commerce solution is more efficient, safer and easier than ever to employ. Whether you have a subscription service, downloadable software or music, a few unique or proprietary products, or a really complex inventory, there are now meaningful solutions you can utilize to showcase and manage your offerings.

We've partnered with numerous clients to implement solutions that meet their exact requirements. By establishing the structure and design of the product offerings up front, we can help you build a site that is easy to maintain and navigate, but equally as important - one that is secure, stable, and user friendly.

A sample product listing that illustrates the depth and versatility of information that can be implemented. In this example, the offering includes current price, original price, % off, user reviews, item description, and other product views (not shown).

CFWebstore® (one of the technologies we use) lets us give you impressive control over and flexibility in your e-commerce site. From a full array of store design, product management, access, and order management features - to shipping, tax, payment and special shopping and check-out functions, we can help you design a merchant site to meet your very particular requirements.

Maintenance Announcement:

On Tuesday, February 16th, SiteVision, Inc. will be performing scheduled maintenance on all servers providing "shared" services (mail, shared web hosting, FTP, web stats, etc.). This maintenance will include installing important security updates for both the Operating System and installed server application software. Please notify SiteVision if you experience any decreased performance or other issues after the maintenance has been completed.

Microsoft Injunction

On December 22, 2009, a United States court of appeals ruled that Microsoft must stop selling versions of Microsoft Word (including Microsoft Office suites) that contain certain functionality that was ruled to infringe on a United States patent.

This injunction only applies to new Microsoft Word and Microsoft Office licenses purchased from Microsoft on or after January 11, 2010 in or for deployment in the United States or its territories. If you are only using licenses acquired prior to January 11, 2010, you do not need to take any action.

Microsoft has updated Microsoft Word 2007 and Microsoft Office 2007 to remove the disputed functionality, which pertains to custom XML tagging. Microsoft has also created a software update for Word 2003 and Office 2003. In the vast majority of cases this functionality is not in use and requires development knowledge to implement. To learn more about the specific custom XML elements removed from Microsoft Word 2007 please read Microsoft Knowledge Base article 978951 at the following website
<http://support.microsoft.com/kb/978951>.

Customer Spotlight

Hendrix College

This client wanted a website that would allow them to maintain up-to-date information about their facilities easily without needing additional software packages.

Virginia United Methodist Center

The Virginia United Methodist Center website is an example of a site written in ColdFusion and the use of FuseBox to create a site that is easily to maintain with back-end administration that allows the client to make large scale changes easily. Menus and content can be (re)moved, renamed or changed completely within the intuitive web browser interface.

Need Help?

Is your web enterprise technology lacking or somewhat out of date? We offer consultations to help you articulate needs, establish goals and get off to a good start.
